

The better the minds powering your business, the further and faster it'll go. Which is why in Singapore, we've established an open door policy to attract the world's finest, making us number one when it comes to skilled manpower.

Vestas, the world's leading supplier of wind power solutions, has tapped this pool of top talent. By housing its Asia Pacific headquarters in Singapore's Fusionopolis, internationally acclaimed scientists, engineers and technologists have helped make research and technological advancements more proficient and effective.

The result? Solutions to make our world better. Like wind turbine generators that harness a sustainable source of energy, to conserve our planet for all our futures. From design fundamentals to the competent production of blades, top minds collaborate to ensure the turbines are able to last no less than twenty years.

It is a clear example of how ready Singapore is to help make great ideas flourish. We call it collective creativity. But we think you'll just call it a very good idea. That works.

To engineer the best ideas, you first assemble the best minds.
